🐙 GitHub 🔗 MYPORTFOLIO

EXPERIENCE

DRDO Internship - Robotics and Humanoid Systems, 06/2025
Internship

- working on a humanoid robot project at DRDO.
- Working with experienced researchers and engineers on innovative projects in the field of robotics.
- Developing technical and problem-solving skills in a high-impact research environment.

National Centre for Radio Astrophysics – TIFR, 09/2024
Attended Summer School

- Studied fundamentals of radio astronomy with strong focus on signal processing, RF systems, and telescope instrumentation.
- Gained hands-on experience working with large-scale telescope systems, including electronics subsystems, and basic system-level testing and analysis.

Infotact Solutions Machine Learning & Data Science 03/2025
Internship

- Completed hands-on training and project work in machine learning techniques and data science workflows.
- Enhanced practical skills in model building, data preprocessing, and performance evaluation.

EDUCATION

Government college of engineering and Research 2022 – 2026
Avasari Pune, Bachelor of Engineering In Electronics and Telecommunication

- 7.83

Sri Sharad Pawar Highschool Chitali, SSC
• 89

Sri Sant Namdev Maharaj Vidyalay Kandhar, HSC
• 87

TECHNICAL SKILLS

Programming Languages — Python, C++, MATLAB, **Embedded Systems** — PID control, Arduino, Esp32, Stm32, PCB designing, Sensor Interfacing, **Tools & IDEs:** — MATLAB, Simulink, Model Sim, KiCad, Keil uVision, Arduino IDE, VS Code, **Robotics & Middleware:** — ROS2 (Humble), Gazebo, Robot System Integration, Control Systems, Real-Time Systems

KEY ACHIEVEMENTS

Achievements — • Selected for Samsung Fellowship under the India Semiconductor Workforce Development Program (ISWDP). • Winner of Ignited Innovators of India Innovation Challenge 2025 • Published paper at National Conference on Sustainable Energy. • Shortlisted and participated in multiple national-level technical competitions: Avishkar, DIPEX, I2I, E-Yantra (IIT Bombay).

PROJECTS

Biped Humanoid Robot Walking Trajectory & Control

- Designed and worked on walking trajectory generation for a biped humanoid robot to achieve balanced and stable walking.
- Developed and analyzed control strategies for maintaining stability and smooth motion during locomotion.
- Gained hands-on experience in control systems for robotics, focusing on dynamics, balance, and motion control.

Smart Water Management System

- Built a system that provides real-time monitoring and control for water management through a single interface.
- Developed a live dashboard to view water data and manage the system remotely.
- Designed a low-cost smart valve that can be controlled using a mobile application.

Sustainable Energy Conversion System

- Designed and studied a system for converting captured carbon dioxide into hydrogen as a clean energy carrier.
- Worked on carbon capture methods and formate-based hydrogen generation for sustainable energy utilization.
- This work resulted in a **research publication at the AICTE National Conference 2023.**
